

Sto Interior Renders

Applications for Interiors

We spend the majority of our lives in closed rooms. A healthy building climate – free of harmful substances, unpleasant odours, mould and noise – is just as much a part of our daily well-being as a harmonious atmosphere.

Providing natural materials for your walls and ceilings, Sto offers one of the cleanest product ranges available on the market, free of solvents and plasticisers as well as extremely low on emissions. The interior range provides the perfect combination of properties: durable, impact-resistant, colour-stable, vapour permeable and highly resistant to micro-organisms.

Coloured finishing renders

A healthy environment for every interior

Manufactured in Germany for guaranteed quality and application consistency;

Sto renders in a variety of grain sizes, textures and colours open up a wide range of application techniques and design options for new projects or refurbishments. Whether it's a question of stippled or free-style textured render, or smooth, rough, coarse or very coarse textures – with Sto interior renders you can create any desired room impression and feel. The diversity is further supported by an immense choice of colour shades that can lend rooms an elegant, modest, modern or rustic appearance whilst providing for excellent reliability and healthier environments.

Through-coloured

Most mineral renders have to be painted to achieve a deeper tone of colour. Sto renders are through-coloured, so the intensity of colour and everyday wear will not affect the appearance of the interior walls or ceilings.

StoColor System

The StoColor finish to compliment the architectural structure and design, with 800 shades or matched to any colour using the Sto Spectrometer, provides a clear framework and systematic approach to colour based on integrated layers, combining texture and colour for aesthetic appeal.

Perfect interaction

- Available in the full spectrum of colours.
- Extremely low water absorption.
- Optimum surface adhesion.
- Shock-proof and highly resistant to cracks.
- Exceptional resistance to mechanical stress.
- Outstanding colour stability and product stability - does not require an equalisation coat.
- Highly resistant to micro-organisms.
- Free from solvents and plasticisers.
- Excellent application properties.

The technical specifications and information on the products contained in the Technical Data Sheets and system descriptions/approvals must be observed.
